The Chemical Engineering Journal 59 (1995) 323–326

THE CHEMICAL ENGINEERING JOURNAL

Subject Index of Volume 59

Absorption
the absorption of carbon monoxide in COSORB solutions: absorption rate and capacity, 243
Activated carbon
stochastic model for equilibrium adsorption onto activated carbon, 205
Agitation
mixing of suspensions in tall vessels with a draught tube, 265
Alkylation
new process for the synthesis of the 2-propyl pentane nitrile under ultrasonic irradiation, 121
α-Amylase
separation and purification of two enzymes from *Bacillus subtilis* using Aliquat 336 reversed micelles: study of the effect of cosolvent concentration, 295
Approximation solution
approximate analytical solutions of effectiveness factors for parallel catalytic reactions, 161
Aqueous phase
back extraction of proteins from reversed micellar to aqueous phase: partitioning behaviour and enrichment, 289
Ash liberation
the graphical representation of ash liberation in milled coal, 23

Back extraction
back extraction of proteins from reversed micellar to aqueous phase: partitioning behaviour and enrichment, 289
Basic data
estimation of heat of vaporization for pure compounds with a residual function method, 101
Batch cooling crystallization
crystallization calorimetry for the assessment of batch seeding and cooling policies, 143
Batch reactor
constrained optimization for fine chemical productions in batch reactors, 229
Biochemical reactors
uncoupling mass transfer limitations of gaseous substrates in microbial systems, 195
Bubble column
effect of gas and liquid properties on gas phase dispersion in bubble columns, 91
Bubble entrainment
determination of mass transfer parameters in surface aerated bioreactors with bubble entrainment, 187

Carbanions
new process for the synthesis of the 2-propyl pentane nitrile under ultrasonic irradiation, 121
Catalyst
shape normalization of biporous pellets, 177

Cellobiohydrolase
synergy between an endoglucanase and cellobiohydrolases from *Trichoderma koningii*, 307
Cellulase
synergy between an endoglucanase and cellobiohydrolases from *Trichoderma koningii*, 307
Chemical oscillator
performance improvement of a chemical reactor by non-linear natural oscillations, 169
Chemical reaction
shape normalization of biporous pellets, 177
the absorption of carbon monoxide in COSORB solutions: absorption rate and capacity, 243
Chemoautotrophic bacteria
uncoupling mass transfer limitations of gaseous substrates in microbial systems, 195
Circulating flow
an analysis of flotation circuit design principles, 15
Coal
evaluation and implementation of control strategies for moving-bed coal gasifiers using MGAS, 133
Column flotation
prediction of large-scale column flotation cell performance using pilot plant data, 1
Competitive adsorption
stochastic model for equilibrium adsorption onto activated carbon, 205
Computational fluid mixing
computational fluid mixing for stirred vessels: progress from seeing to believing, 39
Computer model
prediction of turbulent high Schmidt number mass transfer using a low Reynolds number k–ϵ turbulence model, 153
Control
evaluation and implementation of control strategies for moving-bed coal gasifiers using MGAS, 133
Cosolvent
separation and purification of two enzymes from *Bacillus subtilis* using Aliquat 336 reversed micelles: study of the effect of cosolvent concentration, 295

Dehydration
drying of corn in a flotation fluidized bed. I. Study of the drying kinetics, 221
Diffusion
shape normalization of biporous pellets, 177
Distillation
attainable products for the vapour–liquid separation of homogeneous ternary mixtures, 51
Drying
drying of corn in a floatation fluidized bed. I: Study of the drying kinetics, 221

Elsevier Science S.A.

Dynamic simulation
evaluation and implementation of control strategies for moving-bed coal gasifiers using MGAS, 133
performance improvement of a chemical reactor by non-linear natural oscillations, 169

Effectiveness factor
approximate analytical solutions of effectiveness factors for parallel catalytic reactions, 161
effect of product inhibition patterns on the effectiveness factor of immobilized cell aggregates, 301
Elastic effects
non-viscous effects in the flow of xanthan gum solutions through a packed bed of spheres, 111
Endoglucanase
synergy between an endoglucanase and cellobiohydrolases from *Trichoderma koningii*, 307
Enrichment functions
optimization of counter-current flotation circuits, 7
Evaporation
residence time distribution in a wiped liquid film, 259

Fast reactions
an approximate method for predicting the product distribution of fast reactions in stirred-tank reactors, 285
Film
residence time distribution in a wiped liquid film, 259
Fine chemical production
constrained optimization for fine chemical productions in batch reactors, 229
Flexible baffles
simulation of the behaviour of flexible baffles in flotation columns, 33
Flotation
optimization of counter-current flotation circuits, 7
Flotation circuit
an analysis of flotation circuit design principles, 15
Flotation columns
simulation of the behaviour of flexible baffles in flotation columns, 33
Flotation rate models
optimization of counter-current flotation circuits, 7
Flow
residence time distribution in a wiped liquid film, 259
Fluidized bed
drying of corn in a floatation fluidized bed. I: Study of the drying kinetics, 221
Froth–slurry interface level
simulation of the behaviour of flexible baffles in flotation columns, 33

Gaseous substrates
uncoupling mass transfer limitations of gaseous substrates in microbial systems, 195
Gas-phase dispersion
effect of gas and liquid properties on gas phase dispersion in bubble columns, 91
Growth kinetics
uncoupling mass transfer limitations of gaseous substrates in microbial systems, 195

Heating
hydrolysis of sucrose by conventional and microwave heating in stirred tank reactor, 253
Helical ribbon impeller
determination of mass transfer parameters in surface aerated bioreactors with bubble entrainment, 187
Hollow fiber membranes
uncoupling mass transfer limitations of gaseous substrates in microbial systems, 195
Hydrodynamic modeling
effect of gas and liquid properties on gas phase dispersion in bubble columns, 91
Hydrolysis
hydrolysis of sucrose by conventional and microwave heating in stirred tank reactor, 253

Immobilized cells
effect of product inhibition patterns on the effectiveness factor of immobilized cell aggregates, 301
Industrial grinding
the graphical representation of ash liberation in milled coal, 23
Interfacial area
determination of mass transfer parameters in surface aerated bioreactors with bubble entrainment, 187

Kinetics
new process for the synthesis of the 2-propyl pentane nitrile under ultrasonic irradiation, 121
drying of corn in a floatation fluidized bed. I: Study of the drying kinetics, 221
the absorption of carbon monoxide in COSORB solutions: absorption rate and capacity, 243

Liberation function
the graphical representation of ash liberation in milled coal, 23
Liquid accumulation effects
experimental investigation of liquid accumulation effects during orifice gas metering of two-phase flow, 273
Lockhart-Martinelli type correlation
pressure drop for two-phase air–non-newtonian liquid flow in static mixers, 269

Maize or corn kernels
drying of corn in a floatation fluidized bed. I: Study of the drying kinetics, 221
Mass transfer
prediction of turbulent high Schmidt number mass transfer using a low Reynolds number k–ϵ turbulence model, 153
determination of mass transfer parameters in surface aerated bioreactors with bubble entrainment, 187
uncoupling mass transfer limitations of gaseous substrates in microbial systems, 195
the absorption of carbon monoxide in COSORB solutions: absorption rate and capacity, 243
Metallation
new process for the synthesis of the 2-propyl pentane nitrile under ultrasonic irradiation, 121
Methanogens
uncoupling mass transfer limitations of gaseous substrates in microbial systems, 195
Milled coal
the graphical representation of ash liberation in milled coal, 23
Mineral separation
tomographic imaging for modelling and control of mineral processes, 71
Mixing
mixing of suspensions in tall vessels with a draught tube, 265

Modelling
estimation of heat of vaporization for pure compounds with a residual function method, 101
performance improvement of a chemical reactor by non-linear natural oscillations, 169
mathematical model of goethite synthesis by oxyprecipitation of steel pickling liquors, 279
Moving bed
evaluation and implementation of control strategies for moving-bed coal gasifiers using MGAS, 133

Neutral protease
separation and purification of two enzymes from *Bacillus subtilis* using Aliquat 336 reversed micelles: study of the effect of cosolvent concentration, 295
Non-ideal
stochastic model for equilibrium adsorption onto activated carbon, 205
Non-newtonian fluids
pressure drop for two-phase air–non-newtonian liquid flow in static mixers, 269
Normal boiling point
a simple method to predict surface tension of organic liquids, 181
Nucleation
crystallization calorimetry for the assessment of batch seeding and cooling policies, 143
Number of stages
an analysis of flotation circuit design principles, 15

On-line calorimetry
crystallization calorimetry for the assessment of batch seeding and cooling policies, 143
Onset
non-viscous effects in the flow of xanthan gum solutions through a packed bed of spheres, 111
Optimization
constrained optimization for fine chemical productions in batch reactors, 229
Organic
a simple method to predict surface tension of organic liquids, 181
Orifice gas metering
experimental investigation of liquid accumulation effects during orifice gas metering of two-phase flow, 273
Oxidation
mathematical model of goethite synthesis by oxyprecipitation of steel pickling liquors, 279

Particles
shape normalization of biporous pellets, 177
Perturbation method
approximate analytical solutions of effectiveness factors for parallel catalytic reactions, 161
Phase property effect
effect of gas and liquid properties on gas phase dispersion in bubble columns, 91
Physical properties
estimation of critical pressures of pure substances from data of density and vaporization heat of liquids, 127
a simple method to predict surface tension of organic liquids, 181
Porous medium
non-viscous effects in the flow of xanthan gum solutions through a packed bed of spheres, 111
Precipitation
mathematical model of goethite synthesis by oxyprecipitation of steel pickling liquors, 279
Pressure drop
pressure drop for two-phase air–non-newtonian liquid flow in static mixers, 269
Process identification
crystallization calorimetry for the assessment of batch seeding and cooling policies, 143
Product distribution
an approximate method for predicting the product distribution of fast reactions in stirred-tank reactors, 285
Product inhibition
effect of product inhibition patterns on the effectiveness factor of immobilized cell aggregates, 301
Proteins
back extraction of proteins from reversed micellar to aqueous phase: partitioning behaviour and enrichment, 289

Reaction
approximate analytical solutions of effectiveness factors for parallel catalytic reactions, 161
Reaction kinetics
approximate analytical solutions of effectiveness factors for parallel catalytic reactions, 161
Reactor
new process for the synthesis of the 2-propyl pentane nitrile under ultrasonic irradiation, 121
performance improvement of a chemical reactor by non-linear natural oscillations, 169
Residence time
residence time distribution in a wiped liquid film, 259
Reversed micellar phase
back extraction of proteins from reversed micellar to aqueous phase: partitioning behaviour and enrichment, 289
Reversed micelles
separation and purification of two enzymes from *Bacillus subtilis* using Aliquat 336 reversed micelles: study of the effect of cosolvent concentration, 295

Scale-up
prediction of large-scale column flotation cell performance using pilot plant data, 1
Seeding
crystallization calorimetry for the assessment of batch seeding and cooling policies, 143
Separation
separation and purification of two enzymes from *Bacillus subtilis* using Aliquat 336 reversed micelles: study of the effect of cosolvent concentration, 295
Static mixers
pressure drop for two-phase air–non-newtonian liquid flow in static mixers, 269
Statistical thermodynamics
stochastic model for equilibrium adsorption onto activated carbon, 205
Stirred-tank reactors
performance improvement of a chemical reactor by non-linear natural oscillations, 169
hydrolysis of sucrose by conventional and microwave heating in stirred tank reactor, 253
an approximate method for predicting the product distribution of fast reactions in stirred-tank reactors, 285
Stirred vessels
computational fluid mixing for stirred vessels: progress from seeing to believing, 39

Sucrose
hydrolysis of sucrose by conventional and microwave heating in stirred tank reactor, 253
Surface aeration
determination of mass transfer parameters in surface aerated bioreactors with bubble entrainment, 187
Surface tension
a simple method to predict surface tension of organic liquids, 181
Suspension
mixing of suspensions in tall vessels with a draught tube, 265
Synergy
synergy between an endoglucanase and cellobiohydrolases from *Trichoderma koningii*, 307
Synthesis
mathematical model of goethite synthesis by oxyprecipitation of steel pickling liquors, 279

Temperature
a simple method to predict surface tension of organic liquids, 181
Ternary mixtures
attainable products for the vapour–liquid separation of homogeneous ternary mixtures, 51
Thermodynamics
estimation of heat of vaporization for pure compounds with a residual function method, 101
estimation of critical pressures of pure substances from data of density and vaporization heat of liquids, 127
Tomographic imaging
tomographic imaging for modelling and control of mineral processes, 71
Trichoderma koningii
synergy between an endoglucanase and cellobiohydrolases from *Trichoderma koningii*, 307
Turbulent flow
prediction of turbulent high Schmidt number mass transfer using a low Reynolds number k–ϵ turbulence model, 153
Two bubble classes
effect of gas and liquid properties on gas phase dispersion in bubble columns, 91
Two-phase flow
pressure drop for two-phase air–non-newtonian liquid flow in static mixers, 269
experimental investigation of liquid accumulation effects during orifice gas metering of two-phase flow, 273

Ultrasound
new process for the synthesis of the 2-propyl pentane nitrile under ultrasonic irradiation, 121

Vapour liquid equilibrium
the absorption of carbon monoxide in COSORB solutions: absorption rate and capacity, 243
Vapour–liquid separation
attainable products for the vapour–liquid separation of homogeneous ternary mixtures, 51
Vapour pressure
estimation of critical pressures of pure substances from data of density and vaporization heat of liquids, 127
Viscometry
non-viscous effects in the flow of xanthan gum solutions through a packed bed of spheres, 111

Xanthan
non-viscous effects in the flow of xanthan gum solutions through a packed bed of spheres, 111
